Art Unit: 2855

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown.

Regarding claims 1 and 6 Brown teaches a first sealed 38 volume defined by a first body portion 22; a second sealed 40 volume defined by a second body portion 25: a pressure diaphragm 30 having a first side (col. 3 line 55) and a second side (col. 3 line 60), wherein a pressure of the first sealed volume acts on the first side (col. 3 line 54-56), and wherein a pressure of the second sealed volume acts on the second side (col. 3 lines 57-60); and a force diaphragm 30 exposed to a force (co. 3 lines 30-32); wherein the pressure of the first volume is

Art Unit: 2855

dependent on the force acting on the force diaphragm (co. 3 lines 30-32).

Although Brown does not clearly specify a force diaphragm, one could broadly interpret the pressure diaphragm taught by Brown as a force diaphragm since the pressure diaphragm taught by Brown receives a force from a pressure fluid.

Therefore, the pressure diaphragm is being interpreted as force diaphragm

Regarding claims 2 and 7, although Brown does not specify the first and second sealed volumes to have the same temperature Brown does show the same fluid within the sealed volumes (col. 2 lines 63-65). This would imply that the fluid would substantially be the same temperature in the volumes.

Regarding claims 3 and 8 Brown teaches the first and second sealed volumes are hermetically sealed (col. 4 lines 64-68).

Regarding claim 4 Brown teaches a mechanical stop 24.

Regarding claim 5 Brown teaches a strain gauge 32 connected to the pressure diaphragm (col. 1 lines 18-20).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patents 6148673,5262641, 5289033 and 5207102 all teach differential type pressure sensors. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andre J. Allen whose telephone number is 571-272-2174. The examiner can normally be reached on mon-fri 8:00-4:30.

Application/Control Number: 10/658,059

Art Unit: 2855

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on 571-272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
